

Introduction to World Cloud

Introduction

I have always been in love with Data Visualization since the day I started working on it. I always enjoy deriving useful insights from the data. Before this, I only knew about basic charts like bar graphs, scatter plots, histograms, etc those are inbuilt in tableau and power BI in data visualization. By working every day on this task, I came across many new charts like radial gauge chart, waffle charts, and so on.

So, out of my curiosity, recently I was searching for all the types of charts that are used in data visualization, where this word cloud caught my eye and I found it very interesting. Till now, seeing these word cloud images forced me to think that these are just random images where those words are randomly arranged, But I was wrong, and where it all started. After this, I tried making word cloud from just small data in Tableau and Power BI. After that successful attempt, I wanted to try it by code alike making bar charts, pie charts, and other charts.

I have always been in love with Data Visualization since the day I started working on it. I always enjoy deriving useful insights from the data. Before this, I only knew about basic charts like bar graphs, scatter plots, histograms, etc those are inbuilt in tableau and power BI in data visualization. By working every day on this task, I came across many new charts like radial gauge chart, waffle charts, and so on.

So, out of my curiosity, recently I was searching for all the types of charts that are used in data visualization, where this word cloud caught my eye and I found it very interesting. Till now, seeing these word cloud images forced me to think that these are just random images where those words are randomly arranged, But I was wrong, and where it all started. After this, I tried making word cloud from just small data in Tableau and Power BI. After that successful attempt, I wanted to try it by code alike making bar charts, pie charts, and other charts.

What basically A Word Cloud is?

Definition: A word cloud is a simple yet powerful visual representation object for text processing, which shows the most frequent word with bigger and bolder letters, and with different colors. The smaller the the size of the word the lesser it's important.
